EDUCATION

University of Ghana – Accra, Ghana
Major: BSc. Computer Science
Relevant Coursework: Multimedia and web design, Data structures and algorithms, Software Engineering, Mobile App development, AI and Machine learning, Database fundamentals, Computer networks.

SKILLS

- **Programming languages**: Typescript, JavaScript, Python, C#, PHP
- **Web technologies and frameworks**: HTML, CSS, TailwindCSS, Reactjs, Next JS, FastAPI, Nodejs, Nestjs, Expressjs, GraphQL React Native, Django, Vuejs, Laravel.
- **Databases and ORMs**: MongoDB, PostgreSQL, MySQL, Mongoose, Prisma, SQLAlchemy.
- **Cloud technologies and Hosting services**: AWS, Docker, Heroku, Vercel
- **DevOps & Platform Engineering:** Docker, Kubernetes (K3s), Terraform, Helm, Ansible, ArgoCD, GitOps, Prometheus, Grafana, Loki, Jaeger, Keycloak, RabbitMQ, Redis, PostgreSQL, MongoDB.

EXPERIENCE

Merdeo Foods - Full Stack Developer Intern (Remote) October 2022 – March 2023
Accra, Ghana

- Worked with a team to redesign Merdeofood's website, enhancing performance and UX. Used React.js with React Router, Redux Toolkit for state management, and TailwindCSS for responsiveness. Optimized the ordering process with Yup for form validation and Axios for API integration.
- Collaborated with the backend team to resolve user authentication bugs, leveraging Express.js with JWT for token-based authentication, bcrypt.js for secure password hashing, and Postman for API testing.

Trestle Academy Ghana - Web Developer Intern (Remote) March 2023 – August 2023
Accra, Ghana

- Played a pivotal role in executing diverse web projects with Next.js, integrating TypeScript for robust type safety and React Query for optimized data fetching ensuring high performance and maintainability.
- Engineered server-side solutions using Node.js, Express.js, and GraphQL for dynamic APIs, complemented by MongoDB and PostgreSQL for scalable database management. Enhanced state management through Redux Toolkit and Zustand, while leveraging Docker and Kubernetes for seamless CI/CD workflows and microservice orchestration.
- Utilized Webpack and Vite for efficient bundling, Jest and Cypress for rigorous testing, and ESLint with Prettier for consistent code quality. Deployed apps via AWS, Vercel, and Netlify, ensuring high availability and minimal downtime.
- Collaborated across cross-functional teams using Jira, Trello, and Slack, ensuring alignment of project goals with client requirements. Maintained version control through Git and GitHub Actions, fostering a streamlined and goal-driven work environment.

QuiverTech Solutions - Full Stack Developer (Remote) August 2023 – January 2024
Accra, Ghana

- Engineered a Next.js full-stack website for PMJCGlobal, an international church, with three core features that enhance user engagement and accessibility. The platform is fully responsive and mobile-friendly, establishing a modern online presence.
- Developed a secure and user-friendly donation portal using Next.js API routes and Stripe, integrated with multiple payment services like PayPal and Flutterwave, ensuring seamless and reliable transactions.
- Implemented a real-time radio streaming service with React Player and Socket.IO, enabling church members to access live broadcasts. Optimized for performance and accessibility, fostering community connection.
- Designed and deployed an interactive events management feature using MongoDB, Tailwind CSS, and TypeScript, enabling efficient updates and engaging displays of upcoming events to keep members informed.
- Leveraged Git, Vercel, and CI/CD pipelines to ensure smooth deployment and updates while maintaining version control across the project lifecycle.

Lastmal - Software Developer (Remote) January 2024 – July 2024
Accra, Ghana

- Enhanced a Laravel and Vue.js-powered delivery and logistics web application by developing key features, including fund management using Paystack APIs, withdrawal functionality, and a dynamic referral system.
- Built a seamless gift card functionality for sending, redeeming, and tracking transactions using Pinia for state management and Laravel Passport for API authentication.
- Integrated Lastmal delivery services into Shopify stores using React for the frontend, Node.js, and Express for building scalable backend services, enabling streamlined e-commerce logistics solutions.
- Utilized Vue Router, Vue CLI, and BootstrapVue for frontend design and MySQL for database management to maintain robust and scalable architecture.

Stashup - Front-end Developer (Remote) July 2024 – November 2024
New York, U.S

- Designed and developed a visually engaging and fully responsive landing page for Stashup using React, Vite, TypeScript, and TailwindCSS to deliver a modern and scalable frontend solution.
- Implemented smooth scroll animations and interactive effects with Framer Motion, enhancing user experience and visual appeal.
- Built a demo section that allows users to seamlessly interact with the Stashup mobile app, showcasing the app's core features directly on the landing page.
- Integrated a GraphQL API in the contact support section for dynamic and efficient data communication, ensuring a seamless user support experience.
- Utilized ESLint, Prettier, and Git for maintaining clean, error-free code and streamlined version control during the development process.

GardenIQ - Full Stack Developer (Remote) November 2024 – May 2025
Ohio, U.S

- Architected a custom support system with ClickUp integration, streamlining workflows and reducing ticket resolution time by 35%.
- Developed an AWS Lambda function to intercept and process CloudWatch error logs, cutting average

debugging time by 40% and improving system observability.
- Engineered a drag-and-drop email/messaging template builder using reusable components, enabling marketing teams to launch campaigns 50% faster.
- Built a scalable automation graph engine using event-based architecture and conditional workflows to power intelligent marketing triggers (e.g., cart abandonment, user inactivity), resulting in a 20% increase in customer re-engagement and campaign ROI.

Shoplab - Software Engineer, Part time (Remote) May 2025 **–** ***February 2026***

Stockholm, Sweden

- Collaborated with an engineering team to build and maintain a **multi-tenant e-commerce platform** serving multiple fashion brands, including **Efva Attling, Indiska, and Sptech**, using a shared codebase with brand-specific configurations.
- Contributed to the development and maintenance of **4 production applications** using **Next.js (14/15), React (18/19), and TypeScript**, leveraging SSR, ISR, and dynamic routing for performance and scalability.
- Worked with the team to integrate multiple payment providers (**Klarna, Adyen, Walley**) and shipping solutions (**Ingrid, Klarna Shipping**) using a feature-flag-driven architecture to support per-brand customization.
- Helped build search and discovery features integrating **Findify** and **Typesense**, alongside loyalty systems (**Voyado**), gift cards (**Retain24**), and review platforms (**LipScore**).
- Participated in designing a **dependency injection system** using **TSyringe**, improving modularity and enabling easier provider swapping across storefronts.

Carex Behavioural Health - Software Engineer (Contract) June 2025 **–** ***January 2026***

Ohio, U.S

- Collaborated with a cross-functional engineering team to develop three interconnected healthcare portals for patients, practitioners, and physicians, streamlining telehealth consultations and patient management workflows.
- Integrated Zoom APIs to enable secure virtual appointments, real-time video consultations, and scheduling workflows across the platform.
- Implemented AI-powered consultation intelligence that analyzed patient-provider conversations and generated automated summaries, session notes, and actionable insights for healthcare professionals.
- Designed and deployed two-factor authentication (2FA) and secure authentication workflows to strengthen platform security and safeguard sensitive patient information.
- Engineered integrations for multiple medical monitoring devices, including blood glucose monitors, blood pressure monitors, pulse oximeters, body temperature sensors, and weight-tracking devices through a centralized Medi-Kart ecosystem.
- Built real-time health data synchronization pipelines, enabling practitioners and physicians to monitor patient vitals and device readings live during consultations and follow-up care.
- Developed an in-platform messaging and chat system that facilitated seamless communication between patients and healthcare providers.

Traaple - Lead Developer (Hybrid) August 2025 **–** ***Present***

Accra, Ghana

- Led end-to-end development and deployment of multiple platform applications, helping transition the product from pre-launch instability to a production-ready state within **3 months**.
- Improved application performance by **40%** through frontend and backend optimizations, CDN integration, and caching strategies using Cloudflare.
- Contributed to platform growth, supporting a **300% increase in active users** within 6 months by

improving system reliability and delivery velocity.
- Increased user retention by **45%** by identifying and resolving critical UX bottlenecks and backend performance issues.
- Mentored and coordinated a small development team, introducing code reviews, documentation standards, and best practices that reduced production bugs by **60%**.

Bespoke Labs - Senior Devops Engineer (Contract) March 2026 ***– June 2026***

California, U.S

- Design and develop realistic DevOps and cloud infrastructure environments used to evaluate AI models and autonomous agents on real-world engineering tasks.
- Create software engineering, Kubernetes, CI/CD, and cloud operations scenarios that benchmark agent performance across infrastructure and platform workflows.
- Develop automated grading and validation systems in Python to assess task completion, solution correctness, and infrastructure state.
- Build and maintain containerized evaluation environments using Docker, Kubernetes, Bash, and Infrastructure-as-Code tools.
- Collaborate with AI researchers and platform engineers to improve benchmarking methodologies, infrastructure reliability, and agent evaluation frameworks.
